SINTERED STONE

innovation

SINTERED STONE

Motto's innovation excellence and technological prowess has helped unveil this extraordinary future surface. We are extremely proud to introduce SINTERED STONE - Created by exclusive Italian Technology and created to seamlessly replace granite, marble, corian and quartz surfaces.

To the untrained eye, Sintered Stone is almost impossible to distinguish from natural stone. Sintered stones essentially are the next generation on from Quartz surfaces, perfecting the blend of man-made processes with natural minerals to create a surface, which is mechanically superior in every way.

To not only mimic natural stone designs and patterns, but also go above and beyond them with our Sintered Stone collection, an innovative Italian technology has been adopted.

Traditional natural stones are formed over thousands of years but due to recent technological advancements, Sintered Stone can be created in just a few hours. Minerals and stone particles like the ones found in nature are carefully selected for ensuring the desired quality, colour and texture in Sintered Stones.

JOINT POSSIBILITIES

Birds beak

45° corner

Soft corner

To enhance the beauty of the tiles, a precision trim can be given to them. Our tiles are of 15 mm thickness, which makes it possible to shape the edges of tiles in different styles and create aesthetically rich counter tops as required. Tiles with nicely trimmed edges also make for cleaner and elegant joints.
